DETAILED ACTION

Drawings

1. The application have been allowed, formal drawings are required in response to this Office action. Because reference numerals are not legible and textual reference characters should be in boxes [72, 74, 102, 104, 120].

Allowable Subject Matter

- 2. Claims 1-20 are allowed.
- 3. The following is an examiner's statement of reasons for allowance:

The primary reason for the allowance of claims 1-14 is the inclusion of the limitations of a first conductive element having a different configuration than a second conductive element; and a fluid filled bulb positioned between the at least two conductive element. It is these limitations found in each of the claims, as they are claimed in the combination, that has not been found, taught or suggested by the prior art of record which makes these claims allowable over the prior art.

The primary reason for the allowance of claims 15-18 is the inclusion of the limitation of a second fluid filled bulb positioned between the second conductive element and the transmitter/receiver. It is this limitation found in each of the claims, as it is claimed in the combination, that has not been found, taught or suggested by the prior art of record which makes these claims allowable over the prior art.

The primary reason for the allowance of claims 19-20 is the inclusion of the limitations of a fluid filled bulb positioned between the at least two conductive elements; and the at least two conductive elements work synergistically to form a second radiation

pattern that is different than the first radiation. It is these limitations found in each of the claims, as they are claimed in the combination, that has not been found, taught or suggested by the prior art of record which makes these claims allowable over the prior art.

Norris et al. (U.S. Patent No. 5,594,4564) teaches an antenna device includes a gas filled tube; a voltage source for developing an electrically conductive path along a length of the tube corresponding to a resonant wavelength multiple of the predetermined radio frequency; and a signal transmission source coupled to the tube for supplying a radio frequency signal to the conductive path for antenna transmission. However, Norris et al. does not disclose or suggest a first conductive element having a different configuration than a second conductive element; and a fluid filled bulb positioned between the at least two conductive element.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
